Subject: [806] Anyone near Rayleigh, NC?
Message-ID: <PwfqrPAWgbwwEwKH@yorks.demon.co.uk>

Hi. I am trying to make contact with a radio club on the net. My local City, Hull is 'twinned' with Rayleigh and next year will be the 10th anniversary of that connection.

We want to arrange some sort of radio link with the NC City and would appreciate any help to contact someone there. Sorry not strictly QRP, but maybe some of the QSOs will be!

Message-ID: <Pine.3.89.9512031831.B15608-0100000@freenet>

Hi guys. I haven't asked a question for a while, so I thought I would pose this one to you. I have been told that building a 4:1 balun is quite simple, but the fellow ham that I was talking to did not remember too much. Can anybody help me out, the wire antenna that I'm building calls for a 4:1 balun, and I would prefer to make/build one than purchase one from the local ham dealers.

73 es tn timer.

From: SHUSTER5647@delphi.com
Subject: [800] Explorer II Delight
Message-ID: <01HYCLQ8M91498DT9J@delphi.com>

I started working on my Explorer II / 40 m kit last night about 7 o'clock. Got up this morning and got back to work about 8:00. I was on the air by 4:00 in the afternoon. My first contact was with Ron, K6ZJY in Campbell, CA. He gave me a 559 and was impressed with my 2.98 watts of output.

This is my 4th OHR kit. The OHR 400, Explorer / 20m, and the Wattmeter were fun to build and this kit kept the ball rolling in good style. This first run of instructions was clear and I only found two questionable areas. The 150pf disc caps were identified in the text as 150, but 151 was printed on the actual component. I've heard that different manufacturers will label components differently, so I don't really know if this is a true typo. Also, in the final assembly, a diode is soldered to the power jack. The text says: "Cut both leads of the IN4007 diode". Acting in total trust of Dick's carefully written directions, a super-newbie just might cut both leads off the component! I'm sure that will be clarified in a future edition. I have learned to trust OHR's instructions implicitly. Jumping to conclusions can get you in trouble. Reading the friendly manual has saved me heartache and wasted time. With every kit, I've wanted to do something out of step and was glad 15 minutes later that I followed the instructions to the letter.

All the parts were there. I thought I was missing a resistor, but I found the rascal flirting with a bunch of pretty blue monocraps. I got him into his position and soldered him in place. I have never had a part missing from any OHR kit. In fact, I got a spare .01uf disc cap, two lockwashers, and a 4-40 X 1/4" screw. I already checked my work carefully before the smoke test. They really are spares!

The receiver is really really good. 40 m was open this afternoon and signals were coming up one after the other. They were clear and varied in their strength. To me that's a good sign of a receiver that is really sensitive. When I can hear weak signals near strong ones, I know I have good sensitivity AND selectivity. I'd like to get Dick's specs on receiver sensitivity. I'll bet it's better than .25uv. This receiver is definitely hot, yet it hears with good discriminating ability. Powerful and well-disciplined. Bravo!

The variable bandwidth control is slick. Instead of just having a filter switch to throw, you can vary the filtering. I went up and down the dial isolating signals. It was fun to be able to do a similar type of filtering that I see guys do with their \$3,000 rigs. But I was doing mine on a \$100 qrp rig!

I'm going to be turning that knob a lot.

I like a rig that will power an external speaker. More good news. The Explorer II drives my Radio Shack 8 ohm / 2 watt speaker (21-549) to a nice undistorted volume. No need for an auxiliary amp board in this rig. I could only turn the AF Gain up to about half way with headphones before the good strong audio, with no distortion, started to hurt my ears. Another good sign! I installed an auxiliary 1/8" mini-jack in the back of the rig just for the speaker.

I attached the rig to the OHR wattmeter and straight out to my R7. The R7 is sitting on top of a 20 foot galvanized steel pipe that is bolted to the back of my house. I tuned the R7's top element to give me a 1:1 from 7.005 to 7.025. The rig's output was a sliver short of 3 watts. As I checked across the band, it only dropped to about 2.7 at the high end.

Alignment was not super-easy, but it was not difficult either. I bought the Radio Shack frequency counter when it was on sale for \$80 and it did the job well. The instructions are clear enough that I would encourage a new builder to try it - provided that they had the freq counter that is necessary to do the job. I had it tuned in 20 minutes to my satisfaction.

It's nice to build a rig, have it work well in the traditional areas, and have it do neat new things on top of everything else. That's my experience of the Explorer II. Totally positive.

This is the best \$80 I have spent in a long time. This rig lists at \$100, but I'd like to spend another \$80 on a 30 meter rig. I'm going to have to get my QRP-L Group Purchase Coordinator certificate out and hang it back on the wall for a second run in January. I'll bet I'm not the only Explorer II owner that has decided to start saving to get another one!

Hi gang,

I hope y'all feel like a little Fox hunting Monday night. I'm going to be on later than originally posted for two reasons--to get my little boys to bed and to allow better propagagtion out West.

Please listen for wiley FOX between 10 and 12 PM EST Monday night, Dec. 4th. I'll be monitoring 7040 and 7110 KHz, switching between both frequencies. Throw me whatever you've got, weak or strong signal--it's all part of the fun! 72 es GL,
Paul

Subject: [814] Numbers and FAQ
Message-ID: <199512032216.WAA03447@chuck.dallas.sgi.com>

Gang,

1. The numbers was started at my request in order that this group, like many clubs, would have numbers for the members. Unfortunately, almost three years ago when we started, there were no formal techniques in place (haven't we come a long way in the information age?) to record exactly when people joined the group and we've moved twice since then. So, in order to be somewhat fair the numbers are being assigned when you request one. There is no reason to even request one unless you want another number to put on the long list of club memberships and numbers assigned. The numbers are not secret and we can exchange them during the fox hunt or QSOs, but heck I can go look it up. :-) Save some bandwidth and don't complain about it. Also, the number you get is permanent, i.e. you can't unsubscribe and then come back and request another number to get a "better one", like 589 and 599, or whatever.

:-)

2. I started several times working on the FAQ and when I got to 800 lines or so and wasn't even close to answering the common questions I went on to bigger and better things like operating and building. :-) So, anyone or group is free to do the work. Just get organized and form a committee and communicate so that a lot of work is not duplicated. Want me to randomly pick a set of "numbers"? :-) Steve H. had a good idea to start with the stuff he picked up from the intro which Jim and I did and other stuff that has been added.

The FAQ (Frequently Asked Questions) for this group can get outta hand rather quickly. You could write a book on all the stuff we've covered since the beginning. I just did a summary of the line, word, and character count. It is 813,501 lines, 5,179,135 words, and 33,328,292 characters. That of course includes a lot of mail headers, dates, times, etc. and also dups from those that insist on including the original posting with their return comments/info/etc.

The function of an FAQ should be how to sign on/sign off the group and the ftp site, which the intro has when you do sign up. Also contained in the first email you get from this group is how to get to the ftp site, etc. Required reading.

Now back to the second or third round of why someone with a better ERP should be banned from being called QRP, even though they are running 5 or less WATTS. :-)

Subject: [803] SW-30 On the Air At Last
Message-ID: <951203063745_75230.1405_HHB22-1@CompuServe.COM>

I've been going blind soldering the Explorer II and suddenly realized I hadn't told you guys that my Small Wonder 30 is operational. Probably just an oversight because it had been so long (three months) between the time I finished it and the time I got it on air.

But it is a magic little rig-- the only problem I had was solder bridges which were impossible to see (looked like they were spozed to be there) and virtually impossible to diagnose without a copy of the foil pattern, which Dave faxed to last week. But once those were fixed, it aligned exactly as per the instructions, and all you need to align it is a receiver and a wattmeter.

The amazing thing was, I had an answer and a 5/4/9 report from Nashville TN (I'm in Denver) on my VERY FIRST CQ!

The receiver is red-hot, and the transmitter is clean and stable. Really a little gem, and a really excellent job of kit preparation by Small Wonder Labs. Probably the best construction/alignment/troubleshooting documentation I've ever seen, and as one who has done his time as a technical writer I've seen a LOT of documentation. It lacks some of the features of the Explorer II, but then again it's a bit less expensive and a good bit smaller.

But this wasn't intended as a review so much as an opportunity to publicly thank Dave for a great kit and for outstanding tech support, just an email away at bensondj@aol.com.

All relevant disclaimers apply [g].

I wholeheartedly agree with Mike. I typically read the FS postings for the vicarious thrill of swap meeting without buying anything, and with the possibility of finding something I'm interested in. I barely keep up with the mail on QRP-L, and it is the only list I subscribe to. With the current regulatory mood in Congress, I am very leary of proposing any "rulemaking". Often as not unnecessary rules have the habit of coming back to bite us.

There's also the fact that my screen has a delete icon that I can use to ignore anything I'm not interested in.

There! IMHO (and I used to wonder who posted these things...)

Darrel "Flash" (Flame?), WD6BOR

For those who have read this far, I just got back from the Norcal "unmeeting" in Livermore and can say with no reservations that I had a great time. Seems Doug got a regenerative receiver contest going at the last meeting and there were some wonderful little radios built on little blocks of pine this month. Lots of show and tell and great conversation!

From: Mike.Czuhajewski@bbs.abs.net (Mike Czuhajewski)
Subject: [811] Re Request for Rulemaking
Message-ID: <1995Dec03.161958.25377@abs.net>

Recently, Marshall Emm said,

"Several times over the last week or so I've seen for-sale ads from people who say 'please respond direct as I am not a subscriber.' IMO that stinks. This isn't a newspaper; it's more like a club. Why should the List be available for such purposes to those who aren't otherwise interested in contributing or learning? I hope there's something that can be done, even if it results in messages being accepted only from subscribers (how hard is it to subscribe, anyhow!)."

(end of quote)

There can be a lot of reasons for people not being subscribers. Some people have publicly said, from time to time, that they could not keep up with the traffic flow but still like to read the list from time to time. I can't condemn someone like that; I'm almost to that point myself. I get the daily digest, and occasionally have time to read them the same day they come in (like I did in the last couple of days), but by actual count I currently have nineteen (19) daily digests sitting unread on my disk. For the last three months or so I've been averaging about 2 weeks worth, but it's increased a bit lately!

Another reason for not being a subscriber is that some people are not allowed to do it. A lot of people get their e-mail service through work, either private or government. People in most types of

government jobs are officially forbidden, by regulations, from using their account for personal use--"for official use only" and all that.

Some of them subscribe to qrp-l (usually daily digests, I would suspect) anyhow, but others are unwilling to risk it. A good example is X, a local QRPer who works for a NASA Space Flight Center; he is an active participant in qrp-l, posts messages occasionally, and reads it every day. However, he doesn't want to risk doing it openly by being subscribed, so he ftp's it from the archives at lehigh.edu every day or two. I know of other subscribers to qrp-l who are involved in some level of government who are subscribers to the list. They usually keep a low profile here, and at least two of them have specifically asked me to not reveal their identities for their protection.

And it's not just government, either. In past months I've seen more than one person publicly say goodbye to qrp-l because they were told by their bosses to stop doing it on the company-provided accounts. And they were not government, either.

Just because someone is not a subscriber to qrp-l, I cannot condemn their posting here, as long as it is QRP related. There are lots of reasons why people can't be subscribers. And back to the original comments--replies to for-sale postings should be done privately in any case, regardless of whether a person is a subscriber or not. It is seldom appropriate to reply to qrp-l. And as I noted above, some of those nonsubscribers DO contribute and learn, especially my friend who works for NASA.

I believe there are situations where people are able to read the list indirectly (e.g., via a packet TCP/IP relay) but not able to subscribe. Not certain, but I seem to recall someone leaving a message saying that was their situation.

And there are some folks who pay \$\$/hr and don't want to spend that many \$\$\$ to read everything here. Seems harmless to me -- but that's just one hams opinion!

From qrp-1@lehigh.edu Mon Dec 4 03:04:00 1995
From: Elliott Parker <3ZLUFUR@CMUVM.CSV.CMICH.EDU>
Subject: Re: REView command

I put a note on some of my lists at the time, but guess I forgot which ones.

A few weeks ago most lists with publically available lists and email addresses of the subscribers were hit by several suckers or vacuumers and hoovered the list of subscribers. The jargon seems to be only developing, but, in plain English, somebody came in and took the list of subscribers.

It was usually on a weekend, late at night, with an alias. They set their own account to "conceal" and "nomail." They had to subscribe since all my lists were set so only subscribers could do a "review."

They then put the names and addresses in their own data base. In fact, I have forwarded some of the announcements of some of these "white pages" to CARR-L. iaf.net comes to mind.

And although I'm sure it never crossed a marketing mind, :-) it is a great way to collect subsets of email users interested in a particular subject.

Anyway, I changed the review cmd. so it would not be accessible to just anybody wanting a list of subscribers.

If a subscriber wants a copy, let me know. I will send... one in just a minute. (It is no longer 1000+ names; more like 2500.)

This is not a problem of major importance, but ***if you have thoughts on this, let me know.*** Personally, I would just as soon not have my name brokered around so I get even more junk mail, but I also know some people would actually want their email addresses spread as far as possible.

It's kind of a weird call, but in any case, I think it is up to the individual to make the decision. I believe iaf.net said they would remove any name if the person contacted them and would even remove whole lists, but again, I did not ask for all the CARR-L names to be removed because somebody might actually want to be listed. (I'm not sure they got a list of CARR-L subs since I happened to be online when "jsmith" subscribed, or tried

to subscribe, to every one of my lists and I may have deleted him before he actually vacuumed the names in some cases.)

That would be nice. I've been on the list since Oct and I have most of the abbreviations figured out. There is just one I still haven't found out about yet.

72 ??? is this the qrp'ers 73 (a little 73 ?????) ?????

I have a very out-of-date FAQ on line on the QRP-L Resource web page.

If anyone want to update it or write a new one, please do so and send it to me.
